

Задание:

- Установить Nginx и настроить его на работу с PHP-FPM.
- Установить Apache. Настроить обработку PHP. Добиться одновременной работы с Nginx.

```
sudo su
```

```
apt install nginx
```

```
systemctl start nginx
```

```
cd sites-available
```

```
nano default
```

```
service nginx reload
```

```
apt install apache2
```

```
cd ../..
```

```
cd /etc/apache2/sites-available
```

```
nano 000-default.conf
```

```
<VirtualHost *:80>
```

```
<FilesMatch \.php$>
```

```
    SetHandler "proxy:unix:/var/run/php/php8.2-  
fpm.sock|fcgi://localhost"
```

```
    <FilesMatch>
```

```
/etc/nginx/sites-enabled# apt install php-common libapache2-mod-php php-  
cli
```

```
/var/www/html# cat > info.php
```

```
<?php
```

```
phpinfo();
```

```
?>
```

```
/etc/nginx/sites-enabled# apt install php8.2-fpm
```
